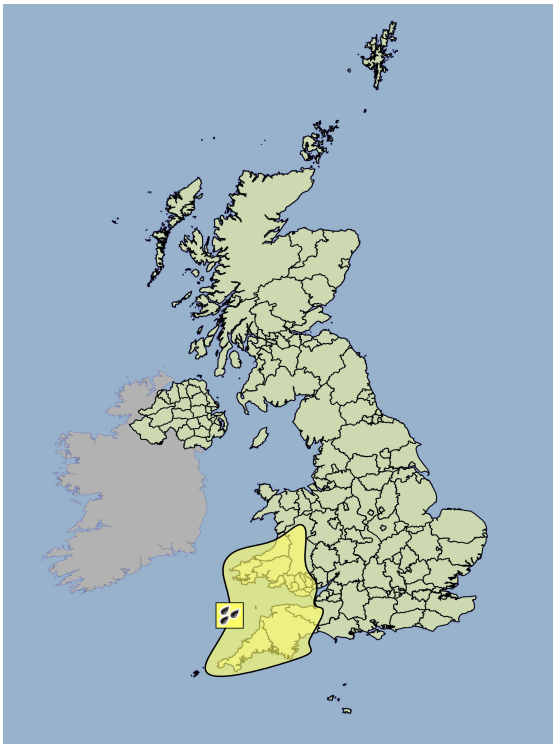
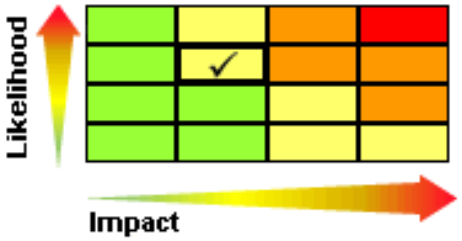
National Severe Weather Warning Service





Chief Forecasters Assessment
A depression will pass northeastwards across the UK on Wednesday and early on Thursday, its associated bands of rain bringing further wet conditions to many areas. In particular, 10 to 20 mm of rainfall will fall quite widely in parts of Wales and south west England, with perhaps 30 to 40 mm in the wettest spots. Given current sensitive hydrological conditions, there is a risk of further surface water flooding in Wales, and both river and surface water flooding in Cornwall, Devon and Somerset.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Wed, 08th Jan 2014** until **09:00 on Thu, 09th Jan 2014**

Periods of heavy rain will affect parts of Wales and south west England during Wednesday, clearing quickly on Thursday morning.

The public should be aware of the potential for further flooding, especially in the areas which have been affected recently.
